INTERNSHIP REPORT

ARTIFICIAL INTELLIGENCE INTERNSHIP

Submitted by: Tabish Khan

Organization: Codec Technologies Pvt. Ltd.

Role: Artificial Intelligence Intern

Duration: 04 August 2026 to 04 September 2026

Submitted in fulfilment of internship learning requirements

Acknowledgement

I would like to express my sincere gratitude to Codec Technologies Pvt. Ltd. for providing me with the opportunity to undertake an internship in Artificial Intelligence. This internship gave me an opportunity to become familiar with important AI concepts, common applications, and the role of AI tools in everyday tasks. I am also thankful to everyone who supported and guided me during this learning experience.

Abstract

This report presents an overview of my Artificial Intelligence internship at Codec Technologies Pvt. Ltd. The internship focused on gaining an introductory understanding of Artificial Intelligence, exploring AI tools, and learning about practical applications of AI in different fields. The report explains basic concepts such as AI, Machine Learning, data, algorithms, chatbots, and automation. It also discusses the benefits, limitations, applications, and future scope of AI. The report is based on the internship details available to me and describes learning activities at a general level.

1. Introduction

Artificial Intelligence (AI) is a field of technology that aims to make computer systems perform tasks that normally require human intelligence. These tasks can include understanding language, recognizing images, finding patterns in data, making predictions, and assisting with problem-solving. AI is becoming an important part of education, healthcare, banking, agriculture, transportation, communication, and business.

The internship provided exposure to AI concepts, applications, and practical learning activities. It helped me understand why AI is widely used and how AI tools can support people in completing tasks more efficiently.

2. Internship Details

Organization: Codec Technologies Pvt. Ltd.
Internship title: Artificial Intelligence Internship
Role: Artificial Intelligence Intern
Duration: 04 August 2026 to 04 September 2026
Main objective: To understand AI concepts, explore AI tools, and gain practical industry exposure.

3. Objectives of the Internship

• Understand the basic meaning and purpose of Artificial Intelligence.

• Explore AI tools and learn how they can support common tasks.

• Become familiar with AI applications in real-life situations.

• Understand basic concepts related to data, algorithms, and Machine Learning.

• Improve technical awareness, problem-solving, and independent learning.

4. What is Artificial Intelligence?

Artificial Intelligence is technology that enables machines or computer programs to perform tasks that usually require human intelligence. AI systems can process information, identify patterns, generate content, and provide suggestions. AI does not think exactly like a human; it works using data, algorithms, and models designed for particular tasks.

Examples of AI include chatbots, voice assistants, recommendation systems, image recognition, translation tools, and systems that help detect unusual banking transactions.

5. Basic AI Concepts Learned

5.1 Machine Learning

Machine Learning (ML) is a branch of AI in which computer systems learn patterns from data and use those patterns to make predictions or decisions. For example, an email filter can learn to identify likely spam messages from examples.

5.2 Data and Dataset

Data means information that a computer can process. A dataset is an organized collection of related data used for analysis or for training and testing an AI model.

5.3 Algorithms and Models

An algorithm is a set of steps used to solve a problem. An AI model is a system trained or configured to identify patterns and produce outputs, such as a prediction, classification, or generated response.

5.4 Natural Language Processing

Natural Language Processing (NLP) is an area of AI that helps computers work with human language. It is used in chatbots, translation, speech-to-text systems, and text analysis.

5.5 Computer Vision

Computer Vision helps computers process and interpret images or videos. Examples include object detection, image classification, and face recognition.

5.6 Generative AI

Generative AI creates new content, such as text, images, summaries, or ideas, based on a user's prompt and the capabilities of the model.

6. Exploring AI Tools

AI tools can help users write, brainstorm, summarize information, create designs, and solve certain problems. Tools such as ChatGPT, Google Gemini, Microsoft Copilot, and Canva's AI features are examples of tools that people may explore for different purposes.

Important: The available internship report does not name specific tools that were used during the internship. Therefore, the tools below are presented as examples for understanding AI, not as a claim that every tool was used during the internship.

• **ChatGPT:** Can help explain topics, brainstorm ideas, summarize text, and draft content.

• **Google Gemini:** Can assist with questions, ideas, and content generation.

• **Microsoft Copilot:** Can support certain writing, productivity, and coding tasks.

• **Canva AI features:** Can assist with design ideas, presentations, and visual content.

7. Learning Activities and Work Covered

The internship report states that the internship provided exposure to AI concepts, applications, and practical learning activities. Based on those stated objectives, the learning areas can be described as follows:

• Studying the meaning of Artificial Intelligence and its common applications.

• Exploring how AI tools can assist with information, writing, ideas, and creative tasks.

• Understanding the basic relationship between AI and Machine Learning.

• Learning how data and algorithms contribute to AI systems.

• Reviewing examples of AI use in education, healthcare, banking, agriculture, and transportation.

• Considering the advantages, limitations, and responsible use of AI.

These points describe general learning areas. They should be edited if the actual internship included specific software, assignments, datasets, coding exercises, or a project.

8. Applications of AI

• **Education:** Explaining concepts, supporting practice, and personalizing learning.

• **Healthcare:** Helping professionals analyze information and identify patterns.

• **Banking:** Supporting fraud detection and unusual-activity monitoring.

• **Agriculture:** Helping analyze crop images, weather, and other farm-related information.

• **Transportation:** Supporting route planning, traffic analysis, and driver-assistance systems.

• **Business:** Automating repetitive tasks and helping analyze information.

• **Communication:** Supporting translation, speech recognition, and chatbots.

9. Benefits of AI

• AI can process large amounts of information quickly.

• It can help automate repetitive tasks.

• It can support decision-making by identifying patterns.

• It can provide assistance at different times of the day.

• It can help people explore ideas and learn new topics.

10. Limitations and Responsible Use

AI systems can make mistakes, provide incomplete information, or reflect problems in their training data. Some systems also raise privacy, security, fairness, and employment concerns. AI-generated information should be checked before it is used for important decisions. Personal or confidential information should not be entered into tools without permission. Human judgment and responsibility remain important.

11. Skills and Knowledge Gained

This internship strengthened my introductory understanding of Artificial Intelligence and its real-life uses. It encouraged me to explore AI tools, learn technical vocabulary, and think about how technology can help solve problems. It also highlighted the importance of checking information, using tools responsibly, and continuing to develop technical skills.

12. Challenges and Learning

A beginner may find some AI terms and technical explanations difficult at first. Understanding the difference between AI, Machine Learning, data, algorithms, and models requires practice. Reviewing simple examples and relating concepts to familiar tools can make these topics easier to understand. The internship experience encouraged continued learning and curiosity about emerging technologies.

13. Future Scope of AI

AI is expected to continue developing across many fields, including education, healthcare, scientific research, accessibility, agriculture, and business. Future work may involve building useful applications, improving data quality, evaluating model performance, and ensuring that systems are safe and fair. Learning programming, mathematics, data handling, and responsible AI practices can help students prepare for further study in this area.

14. Conclusion

The Artificial Intelligence internship at Codec Technologies Pvt. Ltd. provided an introduction to AI concepts, applications, and practical learning activities. It helped strengthen my technical awareness and understanding of how AI tools may be used in different situations. The experience motivated me to continue learning about AI and related technologies. This report summarizes the internship information available and should be updated with any specific tasks or projects completed during the internship.

15. References

The following resources provide introductory information about Artificial Intelligence and related tools. They are listed as general references for the concepts discussed in this report.

• IBM. Artificial Intelligence (AI). https://www.ibm.com/think/topics/artificial-intelligence

• Google for Developers. Machine Learning Crash Course. https://developers.google.com/machine-learning/crash-course

• Microsoft. What is AI? https://www.microsoft.com/en-us/ai

• Canva. Canva AI. https://www.canva.com/ai/

Note: The internship details and dates on the cover page are based on the supplied internship report. The references above support general background concepts and are not presented as proof of specific work completed during the internship.

Declaration

I confirm that this report is intended to summarize the internship details and learning objectives available to me. Any specific tasks, tools, or projects should be included only if they were actually completed during the internship.

CODEC TECHNOLOGIES

NATIONAL INTERNSHIP PORTAL

CERTIFICATE

OF INTERNSHIP

This certificate is awarded to

Tabish Khan

From Codec Technologies Pvt. Ltd.

In recognition of his/her efforts and achievements in completing the 1 Month AICTE & ICAC Approved internship program as

Artificial Intelligence Intern

Conducted from 04/08/2026 to 04/09/2026

Google for Education Partner

AICTE ID - CORPORATE6759d549ce59e1733940553

Dr. Anurag Shrivastava
Program Manager
